UPDATE - 29.07.11 - please see go to the bottom of this post
I had started [this](#) thread but page 4 has been broken for 2 days and not fixed, so let's start again in the hope that EA will address this issue.

Thank you to everyone who provided their specs previously. Please keep posting whether you can play or not 😊

Graphics Card Problem - NVIDIA GeForce 9400 & NVIDIA GeForce 320M
For now these two cards seem to be the main problem.

It appears that if you install the base game but DO NOT UPDATE, it will work on machines running Lion with the 9400 and 320m graphics cards:
RafaGzmn - NVIDIA GeForce 9400M 256 (working because he has not updated the base game with any patches)

WORKING
BluebellFlora - NVIDIA GeForce 9600M GT 256

The Patch which brings the base game up to 1.24 DOES NOT fix this graphics card problem.

15" & 17" MacBook Pro users
If you have one of the following MacBook Pros go to System Preferences > Energy Saver and switch to the higher performance card:

- 15" Late 2008, Model Identifier 5,1
- 17" Early & mid 2009, Model Identifier 5,2
- 15" Mid 2009, Model Identifier 5,3

The 2010 & 2011 models *should* be fine working on the Integrated (better battery life) cards. If not, follow the steps above to switch cards.

If you would like to post your specs here I'll happily add them to the above list.

***29.07.11 - Some people are reporting that if they reinstall the base game WITHOUT PATCHING the game is running ok. So it is therefore an EA patch which seems to be causing this problem. For a more detailed explanation please look at Snapdragon's excellent response [here](#).**
